You have selected a reliable, high-quality dispensing system from Nordson EFD, the world leader in fluid dispensing. UltimusPlus™ Series fluid dispensers are designed specifically for industrial dispensing and will provide you with years of trouble-free, productive service.

This manual will help you maximize the usefulness of your UltimusPlus dispenser.

Please spend a few minutes to become familiar with the controls and features. Follow our recommended testing procedures. Review the helpful information we have included, which is based on more than 50 years of industrial dispensing experience.

Most questions you will have are answered in this manual. However, if you need assistance, please do not hesitate to contact EFD or your authorized EFD distributor. Detailed contact information is provided on the last page of this document.

The Nordson EFD Pledge

Thank You!

You have just purchased the world’s finest precision dispensing equipment.

I want you to know that all of us at Nordson EFD value your business and will do everything in our power to make you a satisfied customer.

If at any time you are not fully satisfied with our equipment or the support provided by your Nordson EFD Product Application Specialist, please contact me personally at 800.556.3484 (US), 401.431.7000 (outside US), or Srini.Subramanian@nordsonefd.com.

I guarantee that we will resolve any problems to your satisfaction.

Thanks again for choosing Nordson EFD.

Srini Subramanian

Introduction

This manual provides specifications, operating features, installation, setup, operation, troubleshooting, and parts information for UltimusPlus Series pneumatic benchtop fluid dispensers. The UltimusPlus dispenser is designed to provide precise dispensing control for advanced applications of glue, oil, grease, epoxy, silicone, sealants, cyanoacrylates, solder paste, and other assembly fluids dispensed with syringe barrels.

UltimusPlus Dispenser Models

- The UltimusPlus I features 0.7–7.0 bar (10–100 psi) constant-bleed air pressure regulation and provides greater control when dispensing any type of fluid.
- The UltimusPlus II features 0.02–1.0 bar (0.3–15 psi) constant-bleed air pressure regulation and provides greater control when dispensing low-viscosity or thin fluids.

Overview of Features

- Intuitive, easy-to-use touchscreen interface that provides simultaneous readout of dispense time, pressure, vacuum, and deposit count
- Storage of 16 dispensing programs in a Program Library
- USB connectivity for exporting or importing dispense programs and for exporting log data
- Ethernet connectivity for triggering the dispenser and switching between active programs
- Time increment adjustments as small as 0.0001 seconds
- MultiShot™ capability, allowing the operator to dispense multiple deposits with only one cycle initiate (such as one press of the foot pedal)
- Dispense log data collection, including the collection of dispensing parameter data (dispense time, pressure, vacuum) and the date, day, and hour / time of each dispense cycle
- Full operator lockout of time, pressure, and vacuum settings
- Optional barcode scanner accessory available for quick program recognition and change
- Easy integration into an automated dispensing system via a single plug-and-play cable
- Input / output connectivity for initiating a dispense cycle (via voltage initiate or contact closure), program selection, emergency stop, clearing alarms, an alarm out signal, and end-of-cycle feedback.
- On UltimusPlus I dispensers, sleep mode for reduced power and air consumption during downtimes
- Quicksilver™ adapter assembly allows maximum air flow to the syringe barrel for faster cycle speeds and pulsing
Nordson EFD Product Safety Statement

⚠️ WARNING

The safety message that follows has a WARNING level hazard.
Failure to comply could result in death or serious injury.

**ELECTRIC SHOCK**
Risk of electric shock. Disconnect power before removing covers and / or disconnect, lock out, and tag switches before servicing electrical equipment. If you receive even a slight electrical shock, shut down all equipment immediately. Do not restart the equipment until the problem has been identified and corrected.

⚠️ CAUTION

The safety messages that follow have a CAUTION level hazard.
Failure to comply may result in minor or moderate injury.

**READ MANUAL**
Read manual for proper use of this equipment. Follow all safety instructions. Task- and equipment-specific warnings, cautions, and instructions are included in equipment documentation where appropriate. Make sure these instructions and all other equipment documents are accessible to persons operating or servicing equipment.

**MAXIMUM AIR PRESSURE**
Unless otherwise noted in the product manual, the maximum air input pressure is 7.0 bar (100 psi). Excessive air input pressure may damage the equipment. Air input pressure is intended to be applied through an external air pressure regulator rated for 0 to 7.0 bar (0 to 100 psi).

**RELEASE PRESSURE**
Release hydraulic and pneumatic pressure before opening, adjusting, or servicing pressurized systems or components.

**BURNS**
Hot surfaces! Avoid contact with the hot metal surfaces of heated components. If contact can not be avoided, wear heat-protective gloves and clothing when working around heated equipment. Failure to avoid contact with hot metal surfaces can result in personal injury.
Halogenated Hydrocarbon Solvent Hazards

Do not use halogenated hydrocarbon solvents in a pressurized system that contains aluminum components. Under pressure, these solvents can react with aluminum and explode, causing injury, death, or property damage. Halogenated hydrocarbon solvents contain one or more of the following elements.

<table>
<thead>
<tr>
<th>Element</th>
<th>Symbol</th>
<th>Prefix</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fluorine</td>
<td>F</td>
<td>Fluoro-</td>
</tr>
<tr>
<td>Chlorine</td>
<td>Cl</td>
<td>Chloro-</td>
</tr>
<tr>
<td>Bromine</td>
<td>Br</td>
<td>Bromo-</td>
</tr>
<tr>
<td>Iodine</td>
<td>I</td>
<td>Iodo-</td>
</tr>
</tbody>
</table>

Check the Safety Data Sheet (SDS) or contact your material supplier for more information. If you must use halogenated hydrocarbon solvents, contact your EFD representative for compatible EFD components.

High Pressure Fluids

High pressure fluids, unless they are safely contained, are extremely hazardous. Always release fluid pressure before adjusting or servicing high pressure equipment. A jet of high pressure fluid can cut like a knife and cause serious bodily injury, amputation, or death. Fluids penetrating the skin can also cause toxic poisoning.

⚠️ WARNING

Any injury caused by high pressure liquid can be serious. If you are injured or even suspect an injury:

- Go to an emergency room immediately.
- Tell the doctor that you suspect an injection injury.
- Show the doctor the following note.
- Tell the doctor what kind of material you were dispensing.

Medical Alert — Airless Spray Wounds: Note to Physician

Injection in the skin is a serious traumatic injury. It is important to treat the injury surgically as soon as possible. Do not delay treatment to research toxicity. Toxicity is a concern with some exotic coatings injected directly into the bloodstream.

Qualified Personnel

Equipment owners are responsible for making sure that EFD equipment is installed, operated, and serviced by qualified personnel. Qualified personnel are those employees or contractors who are trained to safely perform their assigned tasks. They are familiar with all relevant safety rules and regulations and are physically capable of performing their assigned tasks.
Nordson EFD Product Safety Statement (continued)

Intended Use

Use of EFD equipment in ways other than those described in the documentation supplied with the equipment may result in injury to persons or damage to property. Some examples of unintended use of equipment include:

- Using incompatible materials.
- Making unauthorized modifications.
- Removing or bypassing safety guards or interlocks.
- Using incompatible or damaged parts.
- Using unapproved auxiliary equipment.
- Operating equipment in excess of maximum ratings.
- Operating equipment in an explosive atmosphere.

Regulations and Approvals

Make sure all equipment is rated and approved for the environment in which it is used. Any approvals obtained for Nordson EFD equipment will be voided if instructions for installation, operation, and service are not followed. If the equipment is used in a manner not specified by Nordson EFD, the protection provided by the equipment may be impaired.

Personal Safety

To prevent injury, follow these instructions:

- Do not operate or service equipment unless you are qualified.
- Do not operate equipment unless safety guards, doors, and covers are intact and automatic interlocks are operating properly. Do not bypass or disarm any safety devices.
- Keep clear of moving equipment. Before adjusting or servicing moving equipment, shut off the power supply and wait until the equipment comes to a complete stop. Lock out power and secure the equipment to prevent unexpected movement.
- Make sure spray areas and other work areas are adequately ventilated.
- When using a syringe barrel, always keep the dispensing end of the tip pointing towards the work and away from the body or face. Store syringe barrels with the tip pointing down when they are not in use.
- Obtain and read the Safety Data Sheet (SDS) for all materials used. Follow the manufacturer’s instructions for safe handling and use of materials and use recommended personal protection devices.
- Be aware of less-obvious dangers in the workplace that often cannot be completely eliminated, such as hot surfaces, sharp edges, energized electrical circuits, and moving parts that cannot be enclosed or otherwise guarded for practical reasons.
- Know where emergency stop buttons, shutoff valves, and fire extinguishers are located.
- Wear hearing protection to protect against hearing loss that can be caused by exposure to vacuum exhaust port noise over long periods of time.
Nordson EFD Product Safety Statement (continued)

Fire Safety

To prevent a fire or explosion, follow these instructions:

- Shut down all equipment immediately if you notice static sparking or arcing. Do not restart the equipment until the cause has been identified and corrected.
- Do not smoke, weld, grind, or use open flames where flammable materials are being used or stored.
- Do not heat materials to temperatures above those recommended by the manufacturer. Make sure heat monitoring and limiting devices are working properly.
- Provide adequate ventilation to prevent dangerous concentrations of volatile particles or vapors. Refer to local codes or the SDS for guidance.
- Do not disconnect live electrical circuits when working with flammable materials. Shut off power at a disconnect switch first to prevent sparking.
- Know where emergency stop buttons, shutoff valves, and fire extinguishers are located.

Preventive Maintenance

As part of maintaining continuous trouble-free use of this product, Nordson EFD recommends the following simple preventive maintenance checks:

- Periodically inspect tube-to-fitting connections for proper fit. Secure as necessary.
- Check tubing for cracks and contamination. Replace tubing as necessary.
- Check all wiring connections for looseness. Tighten as necessary.
- Clean: If a front panel requires cleaning, use a clean, soft, damp rag with a mild detergent cleaner. DO NOT USE strong solvents (MEK, acetone, THF, etc.) as they will damage the front panel material.
- Maintain: Use only a clean, dry air supply to the unit. The equipment does not require any other regular maintenance.
- Test: Verify the operation of features and the performance of equipment using the appropriate sections of this manual. Return faulty or defective units to Nordson EFD for replacement.
- Use only replacement parts that are designed for use with the original equipment. Contact your Nordson EFD representative for information and advice.
Nordson EFD Product Safety Statement (continued)

Important Disposable Component Safety Information

All Nordson EFD disposable components, including syringe barrels, cartridges, pistons, tip caps, end caps, and dispense tips, are precision engineered for one-time use. Attempting to clean and re-use components will compromise dispensing accuracy and may increase the risk of personal injury.

Always wear appropriate protective equipment and clothing suitable for your dispensing application and adhere to the following guidelines:

- Do not heat syringe barrels or cartridges to a temperature greater than 38° C (100° F).
- Dispose of components according to local regulations after one-time use.
- Do not clean components with strong solvents (MEK, acetone, THF, etc.).
- Clean cartridge retainer systems and barrel loaders with mild detergents only.
- To prevent fluid waste, use Nordson EFD SmoothFlow™ pistons.

Action in the Event of a Malfunction

If a system or any equipment in a system malfunctions, shut off the system immediately and perform the following steps:

1. Disconnect and lock out system electrical power. If using hydraulic and pneumatic shutoff valves, close and relieve pressure.

2. For Nordson EFD air-powered dispensers, remove the syringe barrel from the adapter assembly. For Nordson EFD electro-mechanical dispensers, slowly unscrew the barrel retainer and remove the barrel from the actuator.

3. Identify the reason for the malfunction and correct it before restarting the system.

Disposal

Dispose of equipment and materials used in operation and servicing according to local codes.

About Programs

The dispenser includes 16 preprogrammed dispense programs in the Program Library. On all screens, the active program number (P1 to P16) is displayed in a yellow box.

You can change the currently active program by pressing the program number in the Program Library or by pressing the dark gray (inactive) program box on any screen.

You can adjust any program by editing its settings, accomplished by pressing the name of the program in the Program Library. The dispenser automatically renames an edited program based on the new settings, as shown under “How the System Names Programs” below.

- For details on how to activate (or switch) programs, refer to “Activating a Program” on page 30.
- For details on how to edit a program, refer to “Editing a Program” on page 31.

How the System Names Programs

The dispenser automatically renames an edited program based on the new settings, as shown in the table below.

**Entering Values**
For editable settings, the touchscreen functions as follows:

- If applicable, a numeric entry keypad opens.
- As you enter a value, the value-entry field turns yellow.
- If a value is outside of the acceptable range, a red box appears to identify the error.
- After a few seconds of no interaction, the entered value turns white and a check mark appears briefly, indicating that the value is saved.

<tbody>
<tr>
<td>Time</td>
<td>0.0001–9999 (s)</td>
<td>Sets the open time of the dispense cycle in seconds</td>
</tr>
</tbody>
</table>
| Pressure       | UltimusPlus I: 0.7–7.0 bar (10–100 psi)  
UltimusPlus II: 0.02–1.0 bar (0.3–15 psi) | Sets the air pressure to the syringe barrel in psi or bar                              |
| Vacuum         | 0.0–18.0 inH₂O                | Sets the vacuum pressure in inches of water or inches of mercury                       |
| MultiShot      | Pause Time: 0.0001–999.9 (s)  
Count: 0–9999                   | For each cycle initiate (for example, one press of the foot pedal), sets how many deposits (Count) the system dispenses and how many seconds elapse between deposits (Pause Time). |
| Run Limit      | None (0)–9999                 | Sets the maximum number of shots (cycle initiates) for a program; when the Run Limit is reached, the system stops responding to a cycle initiate. Use Reset Count to reset the Shot Count for a program to 0. **NOTE:** In the MultiShot mode, each dispense cycle is counted in the Run Limit. |
| Sleep Mode     | Enabled or disabled (toggle)  
Time: 5, 10, 60 (min)           | If Sleep Mode is enabled, sets the Time (in minutes) to elapse after the last dispense before the system enters the Sleep Mode |
| Language       | English, Chinese, French, German, Japanese, Korean, Spanish | Sets the language                                                                     |
| Pressure Units | psi, bar, kPa                 | Sets how the system displays pressure units                                             |
| Vacuum Units   | inH₂O, inHG, kPa              | Sets how the system displays vacuum units                                               |
| System Clock   | 12 hour, 24 hour              | Sets how the system displays time                                                      |
| Password       | 4 digit password              | Changes the password that locks and unlocks the system                                 |
1 Unpack the Unit
Unpack the contents of the package and lay them out on a clean work bench. The following items are included with your UltimusPlus dispensing system:

- Dispenser
- Syringe barrel adapter with safety clip
- Syringe barrel stand
- 2.4 m (8 ft) of 6 mm air supply tubing and 1/4 NPT fitting (not shown)
- Foot pedal assembly
- Power supply and power cord (Not shown)
- Dot standards sheet

2 Connect Power
a. Connect the power plug to the power pack. The unit is shipped with a USA-compatible plug and three international plugs. Attach the correct plug to match local power outlets.
b. Connect the power cord to the back of the UltimusPlus.
c. Connect the power cord to your local power source.
d. Connect a suitable ground wire to the ground connection.

3 Connect the Foot Pedal
- Plug the foot pedal into the back of the UltimusPlus.

**NOTE:** The UltimusPlus is normally operated using the supplied foot pedal. You can also operate the UltimusPlus with an optional finger switch, or, you can initiate dispense cycles through the initiate terminals available on the I/O port. Refer to the following to connect dispense cycle initiate signals as an alternative to a foot pedal or finger switch:
- “Voltage Initiate Circuit” on page 54
- “Contact Closure Circuit” on page 57

- (Optional) Connect other inputs / outputs as applicable for your operation. Refer to “Input / Output Connections” on page 54 for details and wiring diagrams.
Installation (continued)

4 (Optional) Connect a Mouse

⚠️ CAUTION
Risk of equipment damage. Do not use the touchscreen with dirty hands or gloves.

- If there is a risk of screen contamination, connect a mouse to the USB port. The touchscreen can be operated with the mouse.

5 Connect the Air Input

a. Install a pressure regulator that is capable of providing the air supply recommended for the dispenser.

   **NOTE:** Clean, dry filtered factory air is required to meet warranty. If your air supply is not filtered, order the 5-micron filter/ regulator (P/N 7002002).

   ⚠️ WARNING
   Bottled nitrogen can be used. If high pressure bottled air or nitrogen is used, a high pressure regulator must be installed on the bottle and set at 7 bar (100 psi) maximum. In this instance, the 5-micron filter regulator is not required.

b. Push one end of the 6 mm air input hose into the AIR IN port on the back of the UltimusPlus.

c. Connect the other end of the hose to the factory air supply.

d. Set the factory air supply as follows:
   - UltimusPlus I: 5.5–7.0 bar (80–100 psi)
   - UltimusPlus II: 1.7–2.4 bar (25–35 psi)
Installation (continued)

Connect the Air Output

• Connect the tubing from the supplied adapter assembly to either AIR OUT port.

NOTES:
• The dispenser has two Air Out ports: one of the front panel and one on the back panel. You can use either one.
• An 0.25 NPT thread exhaust output is available on the back panel. If needed, connect a cleanroom filter muffler (P/N 7017049) to filter the output air to meet Fed 209-B (0.5 micron particulates).

Connect the Syringe Barrel / Dispense Tip

Refer to “Syringe Barrel Filling” on page 44 for detailed information on the filling and use of syringe barrels.

NOTE: If you are dispensing a watery fluid, refer to “Top Filling of Pourable Materials” on page 45.

a. Attach an EFD syringe barrel filled with your fluid to the adapter assembly.
b. Snap the safety clip on the adapter hose closed to prevent dripping. Remember to unsnap the clip when ready to dispense.
c. Replace the tip cap with an EFD precision dispense tip.
d. Place the syringe barrel in the barrel holder.
Installation (continued)

8 Switch the Power On
   a. Place the power switch on the back of the dispenser in the ON position.
      After about 45 seconds, the Welcome screen appears.
   b. Press Home to open the Home screen.
      **NOTE:** The UltimusPlus is shipped with default settings for the display of language (English), air pressure (psi), and vacuum (inH₂O). If these settings are acceptable, skip to step #9. Otherwise, go to “System Settings” on page 40 to make the desired changes, then return here.

9 Set the Dispense Time
   a. Press Time.
   b. Enter a starting dispense time setting.
      **NOTE:** You can use either the up / down buttons or the keypad to adjust settings.
   c. Press Home to return to the Home screen.

10 Set the Air Pressure
   a. Press Pressure.
   b. For initial startup and testing, set the air pressure as follows:
      - UltimusPlus I: 1.0 bar (15 psi)
      - UltimusPlus II: 0.3 bar (5 psi)
   c. Press Home to return to the Home screen.
Installation (continued)

11. Set the Vacuum
   a. Press Vacuum.
   b. Set the vacuum at 0.0 for initial startup and testing.
   c. Press Home 🏠 to return to the Home screen.

   **CAUTION**
   Use EFD filter / muffler P/N 7016875 or wear adequate ear protection when operating the vacuum in close proximity for a prolonged period of time.

12. Purge the Tip
   a. Enable the Steady mode by moving the toggle to the ON position.
   b. Press the foot pedal and allow material to flow from the tip until it is free of air, then release the foot pedal.

13. Connect to Ancillary Components
   a. Install or connect to other system components as applicable. Refer to the quick start guide and / or operating manual provided with those components for installation and setup instructions.
   b. If the dispenser will be integrated into an automated dispensing system, refer to “Connecting an Ethernet Cable for Factory Integration” on page 39.

Installation is now complete. Continue to “Initial Startup and Testing” on page 24 to set up dispensing for your application.
Initial Startup and Testing

Deposit size is controlled by dispense time, pressure, and tip size.
Use the procedures in this section, along with the supplied Dot Standards test sheet, to set up and test the system using the operational mode best suited for your application:

- For applications in which the deposit amount, or volume, will vary, refer to “Setting Up the Dispenser for Steady Mode Operation” on page 25.
- For applications in which the deposit size must be the same for each dispense cycle, refer to “Setting Up the Dispenser for Timed Mode Operation” on page 25.

NOTES:
- Refer to the decision tree below for a visual aid.
- More tips and helpful suggestions for setup are provided under “Helpful Hints” on page 28. Refer to this information as needed during initial startup and testing.

**Remember** - always bring the tip in contact with the work surface at the illustrated angle. After the tip is in position, press the foot pedal. Release the pedal and remove the tip by lifting straight up.

Correct angle for consistent deposits.

Decision Tree for Setting Up Dispenser Operation

Will the deposit amount vary between shots?

- **Yes**
  - Refer to “Setting Up the Dispenser for Steady Mode Operation” on page 25.

- **No**
  - Do you want to enter the dispense time setting manually?
    - **No**
      - Do you want to teach the system the correct dispense time setting?
        - **Yes**
          - Refer to “Manually Setting Up the Dispenser for Timed Mode Operation” on page 27.
        - **No**
          - Refer to “Using the Teach Mode to Set Up the Dispenser for Timed Operation” on page 26.
    - **Yes**
      - Refer to “Manually Setting Up the Dispenser for Timed Mode Operation” on page 27.
Initial Startup and Testing (continued)

Setting Up the Dispenser for Steady Mode Operation

1. If you have not already done so, purge the tip. Refer to “Purge the Tip” on page 23 as needed.

2. Enable the Steady mode.

3. Set Pressure and Vacuum to the following recommended starting values:

<table>
<thead>
<tr>
<th>Dispenser</th>
<th>Recommended Pressure</th>
<th>Recommended Vacuum</th>
</tr>
</thead>
<tbody>
<tr>
<td>UltimusPlus I</td>
<td>1.0 bar (15 psi)</td>
<td>0 inH2O (0 inHG)</td>
</tr>
<tr>
<td>UltimusPlus II</td>
<td>0.3 bar (5 psi)</td>
<td>0 inH2O (0 inHG)</td>
</tr>
</tbody>
</table>

5. Press and hold the foot pedal (or finger switch) to start the dispense cycle.

6. Press Pressure to open the pressure screen. Slowly increase the pressure until material begins to dispense in a controlled flow (not too fast, not too slow).

7. When the desired dispense flow is reached, release the foot pedal.

8. Press Home to use the current settings.

Setting Up the Dispenser for Timed Mode Operation

You can set up the dispenser for timed operation either manually or by using the Teach mode. Nordson EFD recommends using the Teach mode, which allows you to “teach” the system the correct dispense time setting based on deposit size. Refer to the following section as applicable:

- **(Recommended)** Refer to “Using the Teach Mode to Set Up the Dispenser for Timed Operation” on page 26 to use the Teach mode to teach the dispenser the dispense time setting.
- Refer to “Manually Setting Up the Dispenser for Timed Mode Operation” on page 27 to manually enter the dispense time setting.

**NOTE:** Refer to “Decision Tree for Setting Up Dispenser Operation” on page 24 for a decision flowchart on choosing Timed vs. Teach mode.
Initial Startup and Testing (continued)

Using the Teach Mode to Set Up the Dispenser for Timed Operation

1. If you have not already done so, purge the tip. Refer to “Purge the Tip” on page 23 as needed.
2. Ensure that the Steady mode is disabled.

   ![Teach Screen](image)

4. Rest the dispense tip on the Dot Standards sheet.
5. Press and then release the foot pedal to establish your dot size.

   NOTES:
   - Depressing the foot pedal repeatedly has a cumulative effect on the dot size and dispense time.
   - Press Test to repeat the dot at the dispense time setting displayed on the screen.
   - To fine-tune the dispense time, press the up and down arrows to adjust the time. Press Test to see the resulting deposit size.
6. When the desired dispense volume is reached, press Home to use the displayed time setting.
Initial Startup and Testing (continued)

Manually Setting Up the Dispenser for Timed Mode Operation

1. If you have not already done so, purge the tip. Refer to “Purge the Tip” on page 23 as needed.
2. Ensure that the Steady mode is disabled.
3. Press Programs to open to the Program Library screen.
4. Press a program name to open the Program Details screen.
6. Set the Time to 0.025 seconds.
7. Rest the dispense tip on the Dot Standards sheet.
8. Press the foot pedal (or finger switch) to start the dispense cycle. **NOTE:** The pedal only needs to be pressed for a moment. The complete time will run once you activate the dispense cycle.
9. **Changing the time changes the deposit size.** If your dot is too small, increase the dispense time to increase the deposit size. If your dot is too large, decrease the dispense time to decrease the deposit size.
10. When the desired dispense volume is reached, press Home to use the current setting.
Initial Startup and Testing (continued)

Helpful Hints

• There are three core variables for setting up the UltimusPlus high precision fluid dispenser: dispense time, pressure, and vacuum. Adjust just one of these at a time, in small increments, to achieve the correct deposit.

• Another important variable is tip size. Choose the right tip for the deposit type. Remember, smaller tips require more pressure and more time. Try different tips without changing the time or pressure settings and observe the results.

• Tapered tips reduce the amount of air pressure needed to dispense thick materials. They also help prevent drooling at the end of a dispense cycle.

• To ensure smooth fluid flow and to make consistent deposits, keep the dispense tip at a 45° angle to the work surface.

• Use EFD SmoothFlow pistons to make barrel loading, dispensing, and fluid handling cleaner, safer, and more accurate.

⚠️ CAUTION

If you dispense watery fluids and choose not to use EFD pistons, do not increase vacuum pressure rapidly and do not tip the barrel. Vacuum may pull fluid into the adapter hose, or, if the syringe barrel is tipped, fluid may flow back into the dispenser.

• Always use new EFD syringe barrels and tips. Carefully dispose of after use. This procedure ensures maximum cleanliness, prevents contamination, and provides proper safety.

• Do not completely fill the syringe barrel. For most fluids, optimum fill is a maximum 2/3 of the barrel capacity. For cyanoacrylates or watery fluids, optimum fill is 1/2 of the barrel capacity.

Suggestions on Settings

• Avoid high pressure settings with very short time settings (example: 5.5 bar / 80 psi at less than 0.010 seconds). The ideal setup matches air pressure and tip size to produce a “workable” flow rate — no splashing, but not too slow either — with a time setting that is not extremely low.

• With any fluid, always give the air pressure time to do its job. Moderate time and pressure provides the best results since dispensing pressure remains at its peak for a longer period of time.

• Longer dispense time settings generally provide the highest accuracy. However, in the interest of cost-effective production, do not use excessively long dispense time settings. Experiment to find what works best for your application.

• If an Error message indicates that the system did not reach the desired pressure before a dispense cycle was initiated, decrease the Pressure or increase the Time. This ensures that the dispenser operates to its fullest potential with the highest accuracy.
Operation

Once installation and initial startup and testing are complete, the system is ready for routine operation. This section includes general, task-oriented procedures for your quick reference as needed.

Routine Startup

1. Place the power switch on the back of the dispenser in the ON position. After about 45 seconds, the Welcome screen appears.

2. Press Home to open the Home screen. The screen displays the program that was active before shutdown.
   
   **NOTE:** The currently active program number appears next to the Program icon.

3. Ensure that there is an air supply to the dispenser.

4. Start your process.

Setting the Dispense Time, Pressure, or Vacuum

1. Press Home to open to the Home screen.

2. Press Time, Pressure, or Vacuum, then enter the desired setting.
   
   Saved settings are indicated by a check mark, which appears briefly.

   **NOTES:**
   
   • Changes are saved automatically as you enter them. Refer to “Entering Values” on page 17 for details.
   
   • Refer to “Ranges for All Editable Settings” on page 18 for details on all editable settings.

3. Press Home to return to the Home screen.
Operation (continued)

Activating a Program

The dispenser includes 16 typical dispense programs in the Program Library. You can make any of these programs the active program.

There are two ways to activate a program:

- By pressing the program number box in the Program Library
- By pressing a dark gray program number box present on any screen other than the Program Library screen

NOTE: You can also edit any of these programs to create a new program. Refer to “Editing a Program” on page 31 for details.

To Activate a Program through the Program Library

1. Press Programs. The Program Library screen opens.
2. Press the program number (not the program name) to activate the program.
3. Press Home to return to the Home screen.

The currently active program number appears next to the Programs icon, and the Time, Pressure, Vacuum, Run Limit, MultiShot, and Steady Mode values update to show the program settings.

To Activate a Program by Pressing the Program Number Box

Press any dark gray program number box to activate that program.
Operation (continued)

Editing a Program

The dispenser includes 16 typical dispense programs in the Program Library. You can edit the settings of any program.

There are two ways to edit a program:

- By making changes to the currently active program from the Home screen
- By opening a program in the Program Library

NOTES:

- There are always 16 programs in the program library; you can edit any of these programs at any time with your desired settings.
- Changes are saved automatically as you enter them. Refer to “Entering Values” on page 17 for details.
- Programs are named by the dispenser. Refer to “How the System Names Programs” on page 16 for details.
- Refer to “Ranges for All Editable Settings” on page 18 for details on all editable settings.

To Edit a Program from the Program Library

1. Press Programs. The Program Library screen opens.
2. Press the name of a program (not the program number) to open the Program Details screen for that program.
3. On the Program Details screen, make the desired changes. Press Back to return to the currently open Program Details screen between changes.
4. To make the program you are editing the currently active program, press the program number of the edited program.

The selected program number appears next to the Program icon.

To Edit the Currently Active Program on the Home Screen

1. Go to the Home screen.
2. From the Home screen, you can make changes to the following editable settings:
   - Time, Pressure, and Vacuum (refer to “Setting the Dispense Time, Pressure, or Vacuum” on page 29)
   - Run Limit (refer to “Setting a Run Limit, Viewing the Shot Count or System Count, and Resetting the Shot Count” on page 42)
   - MultiShot (refer to “Using the MultiShot Feature” on page 36)

Editable settings on the Home screen: Time, Pressure, Vacuum, Run Limit, and MultiShot

Editing Program 3 (P3) on the Program Details screen while Program 1 (P1) is still the active program
Operation (continued)

Locking or Unlocking the System

**NOTE:** The default password is 1111. Refer to “Changing the System Password” on page 41 to change the password.

**To Lock the System**
1. On the Home screen, press Lock 
   The Lockout screen opens.
2. Enter the password to lock the system.
   The system automatically returns to the Home screen, which is grayed out. A closed lock on the Unlock button also indicates the locked status.

**To Unlock the System**
1. Press the Unlock button 
2. On the Lockout screen, enter the 4-digit password.
   The system returns automatically returns to the Home screen and normal operation is restored.
Operation (continued)

Exporting Programs to a USB Drive

You can use the USB port on the dispenser to export all programs in the Program Library to a USB drive. Once exported, the programs can then be imported to a different dispenser.

1. Insert a USB drive into the USB port.
2. Press Programs > Export / Import Library.
3. Press Export Library to export all programs to the USB drive.
   
   If the export is successful, the system indicates the following: “Export successful.” If the export fails, refer to “Dispenser Warnings” on page 50 to troubleshoot the problem.
   
   **NOTE:** Exported dispenser programs are formatted as an *.ult file.
4. Press Home to return to the Home screen.

Importing Programs from a USB Drive to a Dispenser

1. Insert a USB drive into the USB port.
2. Press Programs > Export / Import Library.
3. Press Import Library to import all programs on the USB drive to the Program Library.
   
   If the import is successful, the system indicates the following: “Import successful.” If the import fails, refer to “Dispenser Warnings” on page 50 to troubleshoot the problem.
   
   **NOTE:** All the programs on the USB drive are imported to the dispenser, replacing existing programs.
4. Press Home to return to the Home screen.
Operation (continued)

Using the Barcode Scanner

You can use a barcode scanner to change the active dispense program. Use of the barcode scanning function requires the following:

• The optional barcode scanner must be connected to the USB port on the dispenser. Refer to “Accessories” on page 49 for the scanner part number.
• The barcode for the workpiece must be assigned to a dispense program.

NOTE: A barcode can be assigned to only one dispense program. If the same (previously assigned) barcode is assigned to a different program, then the barcode will be reassigned from the original program to the later program.

Barcode Types

The barcode scanner can read the following barcode types:

• UPC-A
• Code32
• Code11
• MSI
• UPC-E
• Code39
• Codabar
• EAN-8
• Code128
• Industrial 2 of 5
• EAN-13
• Code93
• Code11
• Codabar
• Industrial 2 of 5
• Interleaved 2 of 5

To Assign a Barcode to a Program

1. Connect the barcode scanner to the USB port on the dispenser.
2. Press Programs \(\Rightarrow\). The Program Library screen opens.
3. Press the name of a program (not the program number) you want to add a barcode to. The Program Details screen opens.
5. Press Assign Barcode.
6. Use the barcode scanner to scan the barcode. The scanned barcode appears in the Currently Assigned Barcode field.

NOTE: If a barcode has 8 or fewer digits, all 8 digits are displayed. If a barcode has 9 or more digits, the first three digits are displayed, followed by an ellipsis, and then followed by the last 3 digits (e.g., XXX...XXX).
7. Press Back \(\Rightarrow\) to return to the Program Details screen. The barcode is displayed next to Barcode.

NOTE: The system also adds the barcode information to the program name.
8. Press Home \(\Rightarrow\) to return to the Home screen.
To Delete a Barcode
1. Open the Program Details screen that includes the barcode you want to delete.
3. Press Delete Barcode. The system deletes the barcode association, and also removes the barcode information from the program name.
4. Press Home  to return to the Home screen.

To Run a Barcode Program
1. Scan the barcode. The system switches to the associated program.
2. Position the tip over the correct location on the workpiece.
3. Initiate the dispense cycle.
Operation (continued)

Using the MultiShot Feature

The MultiShot feature allows you to dispense multiple shots with one dispense cycle initiation.

NOTE: This feature is not usually used in an automated dispensing system.

To Enter MultiShot Settings

2. Press Set MultiShot Count to enter a setting for the number of deposits to make per dispense cycle.
3. Press Back to return to the MultiShot screen.
4. Press Pause Time (s) to enter a setting for the amount of time to elapse between deposits.
5. Press Back to return to the MultiShot screen.

To Use MultiShot Dispensing

1. Move any MultiShot toggle to the ON position.

NOTE: A MultiShot toggle is provided on the Home, Program Details, and MultiShot screens. The Home screen shows the MultiShot settings and ON / OFF status.

2. To start the MultiShot dispense cycle, press the foot pedal one time.
3. To stop the MultiShot dispense cycle, press the foot pedal again.
4. To disable MultiShot, move any MultiShot toggle to the OFF position.
Operation (continued)

Using the Sleep Mode (UltimusPlus I Only)

Use the sleep mode to:

- Reduce factory power consumption
- Reduce factory air consumption when vacuum is being used

You can also set how long the system waits before entering the Sleep Mode.

To Enable / Disable the Sleep Mode

On the Home screen, move the Sleep Mode toggle to the ON (enabled) or OFF (disabled) position. You can also enable or disable Sleep Mode on the Sleep Mode screen.

NOTE: Sleep Mode can be enabled only when the pressure is above 1 bar (15 psi). If the pressure drops below 1 bar (15 psi), a warning appears.

To Set the Sleep Mode Timer

1. Press Settings > Sleep Mode.
2. Press the button for the amount of time to elapse after the last dispense cycle before the system enters the Sleep Mode.
3. If needed, move the Sleep Mode toggle to the ON (enabled) position.
4. Press Home to return to the Home screen.

Clearing Alarms

When an alarm occurs, a red warning box appears on the touchscreen. Refer to “Dispenser Warnings” on page 50 to troubleshoot and correct alarm conditions.

Use either of the following methods to clear an alarm:

- Touch (or click, if using a mouse) anywhere on the touchscreen.
- If applicable, toggle the Clear Alarm input (refer to “Clear Alarm Circuit” on page 55 for wiring details).
Operation (continued)

Viewing or Exporting the Dispense Log

The Dispense Log captures dispensing data, including a time stamp.

The system stores up to 100,000 log entries. When the log is nearly full, the system generates a Memory Low warning. When the log capacity is reached, the system generates a Memory Full warning, at which point log entries will no longer be saved. When the system provides a log memory warning, or anytime you want to save the log data, follow this procedure to export the log to a USB drive.

1. Insert a USB drive into the USB port on the dispenser.
2. Press Log  
   The Dispense Log screen opens. The screen shows the log capacity used and the number of total log entries.
3. To view the log entries or to free up memory, export the log. Select either Export and Delete Log or Export and Keep Log, as desired.
4. The system exports all log entries to the USB drive.
   NOTE: Dispense log entries are exported as *.csv files and can be opened in Windows® Notepad, Excel™, and other compatible applications.
5. Press Home  to return to the Home screen.
Operation (continued)

Connecting an Ethernet Cable for Factory Integration

The dispenser can be integrated into a factory system, such as an automated dispensing system. For example, when the dispenser is connected to a robot, you can set up the system to switch programs automatically.

For network connection instructions, go to the UltimusPlus web page.

**NOTE:** The dispenser must have a unique static IP address. If you need to change the dispenser IP address, refer to “Changing the Dispenser IP Address” on page 41.
System Settings

Setting the Language

1. Press Settings > Language.
2. Select the desired language:
   • English (default)
   • Chinese
   • French
   • German
   • Japanese
   • Korean
   • Spanish
3. Press Home to save the setting and return to the Home screen.

Setting the Units of Measure

1. Press Settings > Units of Measure.
2. Select the desired units of measure for Pressure or Vacuum. Refer to “Ranges for All Editable Settings” on page 18 for details on all editable settings.
3. Press Home to save the setting and return to the Home screen.

Setting the System Date or Time

1. Press Settings > System Clock.
2. Enter the correct data for Year, Month, Day, or Time. You can also choose to display time based on a 24-hour clock.
   Saved settings are indicated by a check mark, which appears briefly.
3. Press Home to save the setting and return to the Home screen.
System Settings (continued)

Changing the System Password

⚠️ CAUTION
Record the password in a safe place. A fee is required for password recovery.

1. Press Settings > Password.
2. Enter the current password.
   
   **NOTE:** The default password is 1111.
3. Enter the new password.
4. Re-enter the new password.
   
The new password is saved. When the system is locked, the password is required to unlock the system.

Changing the Dispenser IP Address

The dispenser must have a unique static IP address. If the dispenser is connected to a network that includes another device with the same IP address, follow this procedure to change the IP address of the dispenser. The other connected devices in the system must also have a unique IP address. If you need to change the IP address of a computer, refer to "Appendix A, Changing the IP Address of a Computer" on page 58.

1. Press Settings > Ethernet.
   
The Ethernet Setup screen opens
2. To change the IP address of the dispenser, enter the desired IP address and then press Activate & Reboot.
3. Press Home to return to the Home screen.
Setting a Run Limit, Viewing the Shot Count or System Count, and Resetting the Shot Count

**Shot Count** is the number of shots, or deposits, that have been made for a program. This value can be reset to 0.

**Run Limit** is the maximum number of shots that can be made for a program. This value is editable.

**System Count** is the total number of shots made by the system in its lifetime. This value is not editable.

All three of these values are shown on the Home screen.

**To Reset the Shot Count**
Press Reset Count 🔄. The system resets the Shot Count for the currently active program to zero (0).

**To Enter a Run Limit**
1. Press Programs 📚. The Program Library screen opens.
2. Select the program to edit. The Program Details screen opens.
3. Press Run Limit, then enter the desired setting.
   **NOTE:** Run Limit can also be adjusted from the Home screen.
4. Press Home 🏡 to return to the Home screen.
System Settings (continued)

Viewing System Information

1. Press Settings > Company Info.
2. On this screen you can view the following system information:
   - Telephone numbers
   - Nordson EFD email address
   - Nordson EFD global directory URL
   - Dispenser serial number
3. Press Home to return to the Home screen.

Viewing the Software Version

Press Settings to open the Settings screen. The current software version is displayed next to Software Update.

Updating the Software

For software update files and instructions, go to the UltimusPlus web page.
Syringe Barrel Filling

Selecting an Adapter Assembly

For the best dispenser performance, Nordson EFD offers the Quicksilver adapter assembly. This adapter assembly provides the following advantages over the standard adapter assembly:

- Maximum air flow to the material for faster cycle speeds and minimal full-to-empty variation
- Larger air tubing and adapter orifice for a faster fill of air into the syringe barrel and faster evacuation of air pressure (back pressure) to prepare for the next dispense cycle, both ideal for high cycle automated dispensing
- Works for all fluids, but is especially effective for thin fluids to eliminate dripping

Selecting a Piston

Choose the best piston for your material. Precision molded in six unique styles, Optimum® pistons ensure precise control for virtually any fluid in any application:

- White SmoothFlow (general purpose): For use with most fluids.
- Red SmoothFlow (tight fit): For use with mechanical dispensing equipment.
- Beige SmoothFlow (loose fit): Loose-fitting pistons are used with air-entrapped fluids.
- Orange flatwall: Flat-walled pistons have a looser fit to prevent “bouncing” when dispensing stringy, air-entrapped fluids.
- Blue LV Barrier: LV Barrier pistons are used with cyanoacrylates and very low viscosity fluids.
- Clear Flex: Flex pistons are flexible and reduce “bouncing” in viscous fluids while maintaining excellent wall wiping.

Remember

For best results, EFD strongly recommends the use of a piston as part of your dispensing system.

SmoothFlow piston prevents fluid backflow.

Fumes cannot escape.

No air gap when using the SmoothFlow piston.

If you choose to not use a piston when dispensing thin fluids, remember these important points.

Do not tip the barrel upside down or lay flat. This will cause the liquid to run into the dispenser.

When changing tips or attaching a tip cap, snap the safety clip completely closed to prevent any dripping or bubbling.
Syringe Barrel Filling (continued)

Filling the Syringe Barrel

**NOTE:** Refer to the Nordson EFD catalog for filling equipment options, such as the Atlas™ filling system.

---

**CAUTION**

Do not overfill a syringe barrel. Leave room for the piston and adapter. If the installed adapter touches the piston, material will be forced out of the syringe barrel.

---

**CAUTION**

To the greatest extent possible, prevent air from being trapped under the piston. Air trapped under the piston, either mixed uniformly in the material or larger bubbles trapped during the filling process, can cause several dispense problems including, but not limited to, drooling after dispense, piston bouncing, and tunneling of air through thick materials.

### Top Filling of Pourable Materials

1. Install the tip cap.
2. Pour material into the syringe barrel to the appropriate fill level, leaving room to install the piston and the adapter.
3. To minimize the formation of trapped air under the piston and to prevent material from leaking past the piston wiper, insert the piston until it fully engages with the material.

**EXCEPTION:** If using the Blue LV Barrier piston, fill the syringe barrel to 1/2 of the barrel capacity and position the piston above the fluid and just below the adapter.

### Top Filling of Medium- to High-Viscosity Materials

1. Install the tip cap.
2. Pour material into the syringe barrel to the appropriate fill level, leaving room to install the piston and the adapter. Observe the following guidelines:
   - Transfer material using the best available tools to minimize the formation of air bubbles in the material.
     **NOTE:** To quickly and efficiently remove entrapped air from material packaged in syringes, consider using a Nordson EFD centrifuge, such as the ProcessMate™ 5000.
   - Take care to minimize the formation of residue on the syringe barrel walls. When a piston is inserted, residue can form a seal at the piston wiper, interfering with proper installation.
3. To minimize trapped air under the piston and to prevent material from leaking past the piston wiper, insert the piston until it fully engages with the material.
Syringe Barrel Filling (continued)

Bottom Filling of All Materials

1. Insert the piston in the syringe barrel and push it down until it is flush with the bottom of the barrel.

2. Control the flow rate of the material to prevent trapping air bubbles at the barrel shoulder and at the piston wiper. If bubbles are being trapped, the flow rate is probably too fast.

3. Apply steady pressure on the piston to maintain full engagement with the material during fill.

   NOTES:
   - If the material pressure is too high, material can leak past the piston wiper.
   - If the material pressure is too low, the piston may float on the rising material, increasing the possibility of trapped air bubbles under the piston.
   - If either of the above occurs, press down on the piston until it fully engages with the material.

4. Install the tip cap.
Syringe Barrel Filling (continued)

Syringe Barrel Filling Alternatives

Nordson EFD offers productive alternatives to traditional syringe barrel filling methods. Here are a few suggestions that can help keep your work area clean, save time, and reduce the chance of entrapped air in the fluid.

- Use the Atlas™ Filling System, P/N 7022445 (12 fl oz). Pack the fluid into a 2.5 fl oz, 6 fl oz, 12 fl oz, 20 fl oz, or 32 fl oz cartridge as shown. Then place the pre-filled cartridge into the barrel loader. Using air pressure, the barrel loader fills the syringe barrel (with a piston installed) from the bottom up.

  If the fluid comes packed in a 300 ml (1/10 gallon) caulk type cartridge, use the EFD P/N 7022452 filling system.

  For fast, volumetric filling, the P/N 7022068 Atlas Filling System is an accurate, easy, and fast system for filling syringe barrels.

- If you receive frozen epoxies or other fluids in medical type syringes with a manual plunger, request the EFD luer-to-luer fitting to transfer the material.

Contact an EFD fluid application specialist for additional assistance.

P/N 7022445 (12 fl oz) Atlas Filling System. Also available in 2.5, 6, 20, and 32 fl oz.

P/N 7022452 for pre-filled 300mL (1/10 gal) caulk type tubes.

Barrel Rack
P/N 7022411 for 3cc and 5cc barrels
P/N 7022429 for 10cc, 30cc, and 55cc barrels

Luer-to-luer fitting
P/N 7012606 100 pack
P/N 7014838 1 piece
**Service**

UltimusPlus dispensers require no routine mechanical maintenance.

For the best operating performance, Nordson EFD recommends routinely checking for software updates. For software update files and instructions, go to the UltimusPlus web page.

Technical Data

I/O Port Pin Assignments

If desired, you can connect inputs / output to the I/O port on the back of the controller.

- All outputs are 24 VDC, 100 mA maximum
- Inputs / outputs can use either the courtesy 24 VDC power source at pin 15 or an external 24 VDC source.

Refer to “Input / Output Connections” on page 54 for detailed information and wiring diagrams.

Input / Output Connections

Voltage Initiate Circuit

A dispense cycle can be initiated by a 24 VDC signal across D-Sub connector pins 5 and 6. The signal can be momentary (no less than 0.01 seconds) or maintained. A new dispense cycle will begin after the signal is removed and then applied again.

Program Selector Circuit

The active program number can be incremented by initiating a 24 VDC signal across D-Sub connector pins 11 and 12. The signal can be momentary (no less than 0.1 seconds) or maintained. The active program number increments on each rising edge signal. P1 (Program 1) will change to P2, then to P3, and so on, up to P16. If the program selector signal is initiated when P16 is the active program, then the active program returns to P1.
Input / Output Connections (continued)

Emergency Stop (E-Stop) Circuit

The UltimusPlus dispenser can be emergency stopped via I/O from an external source by initiating a 24 VDC signal across D-Sub connector pins 1 and 2. The signal can be momentary (no less than 0.1 seconds) or maintained. The signal will remain in E-stop if held in a high state.

When an E-stop occurs:
- The dispenser stops attempting to regulate pressure
- The output alarm signal from the dispensers goes high
- An red warning box appears on the touchscreen

The dispenser will stay in E-stop mode until either of the following occurs:
- The alarm is cleared by touching (or clicking) anywhere on the touchscreen.
- The Clear Alarm I/O is toggled

Clear Alarm Circuit

A dispenser alarm or emergency stop can be cleared via I/O from an external source by initiating a 24 VDC signal across D-Sub connector pins 3 and 4. The signal can be momentary (no less than 0.1 seconds) or maintained.
Input / Output Connections (continued)

Alarm Out Circuit

The UltimusPlus dispenser can alert external devices if it enters an alarm state; this is accomplished by creating a logic high 24 VDC signal between D-Sub connector pins 7 and 14 (DC Common). The signal remains high as long as the dispenser is in an alarm state, preventing dispensing.

When a dispenser alarm occurs:

- The dispenser prevents any dispense cycles from occurring
- A red warning box appears on the touchscreen

The dispenser will stay in the alarm state until either of the following occurs:

- The alarm is cleared by touching (or clicking) anywhere on the touchscreen.
- The Clear Alarm I/O is toggled (refer to “Clear Alarm Circuit” on page 55).

End-of-Cycle Feedback Circuit

The UltimusPlus dispenser can send an End-of-Cycle (EOC) feedback signal to an external source. The 24 VDC EOC output signal is active low during dispensing across D-Sub connector pins 8 and 14 (DC common). The EOC feedback can be used by external equipment to acknowledge an active dispense cycle.
Contact Closure Circuit

A dispense cycle can be initiated with a contact closure via a 24 VDC signal across D-Sub connector pins 9 and 10. The signal can be momentary (no less than 0.01 seconds) or maintained. A new dispense cycle will begin after the signal is removed and then applied again.
Appendix A, Changing the IP Address of a Computer

Each computer in a networked system must have a unique IP address. Follow this procedure to change the IP address of a computer.

**NOTE:** To change the IP address of the dispenser, refer to “Connecting an Ethernet Cable for Factory Integration” on page 39.

1. On your computer, navigate to the “Network and Sharing Center.”

2. Click “Change Adapter Settings.”

3. Select “Local Area Connection” (Windows 7) or “Ethernet” (Windows 10).

4. Double-click (Windows 7) or right-click (Windows 10) to select “Properties.”
Appendix A, Changing the IP Address of a Computer (continued)

6. Click “Use the following IP address” and then enter the desired IP address.  
   **NOTE:** The digit range for each field is 1–255.

7. Click OK > OK to save the new IP address.

8. Click OK in the Local Area Connection properties window (Windows 7) or the Ethernet properties window (Windows 10).
NORDSON EFD FIVE(1)(2) YEAR LIMITED WARRANTY

This Nordson EFD product is warranted for five(1)(2) years from the date of purchase to be free from defects in material and workmanship (but not against damage caused by misuse, abrasion, corrosion, negligence, accident, faulty installation, or by dispensing material incompatible with equipment) when the equipment is installed and operated in accordance with factory recommendations and instructions.

Nordson EFD will repair or replace free of charge any defective part upon authorized return of the part prepaid to our factory during the warranty period. The only exceptions are those parts which normally wear and must be replaced routinely, such as, but not limited to, valve diaphragms, seals, valve heads, needles, and nozzles.

In no event shall any liability or obligation of Nordson EFD arising from this warranty exceed the purchase price of the equipment.

Before operation, the user shall determine the suitability of this product for its intended use, and the user assumes all risk and liability whatsoever in connection therewith. Nordson EFD makes no warranty of merchantability or fitness for a particular purpose. In no event shall Nordson EFD be liable for incidental or consequential damages.

This warranty is valid only when oil-free, clean, dry, filtered air is used, where applicable.

(1)Two years for end users in Asia
(2)One year if integrated into machinery
