Factory-direct equipment rebuild and service program for improved customer productivity and reduced maintenance requirements.

Servicing, cleaning, repair and upgrades available at Nordson facilities for installed-base equipment provides customer convenience.

**Services Provided**

- Standard packing gland or seal replacement
- Cleaning of product (free of material)
- Replacement of worn, damaged or corroded components
- Upgrade of motors, safety features or sensing

**Benefits**

- Equipment returned ‘as new,’ extending the working life
- Limited warranty extension
- Checklist inspection report to benchmark your production line for ISO compliance that includes an assessment of equipment condition upon arrival at our facilities, documentation of repairs and service as well as test results.
- Service by experienced Nordson engineers in a custom-designed workshop environment with direct access to all necessary tooling and components
- Planned and regular rebuilds reduce unnecessary surprises and costly downtime
