Three Unique Tips in a Single Tool Using KISS™ Valve Technology

Any Combination:

- Spray
- Stream
- Ribbon

This dispensing tool circulates material down to the dispense head and back to the fluid source for fluid consistency.
- Ideal for multiple bead profiles and shorter dispense cycle times.
- The system program selects which Dispense Tip is to operate.
- Each Dispensing Tip is independently selected for the right bead profile.
- Dispense Tip bead profiles include Spraying, Streaming and Slot Ribbon applied beads of sealer materials.
- The MFG Assembly is slim and compact for easy access into small openings and confined areas.
- The MFG Assembly can be mounted on the robot wrist or pedestal mounted.

Sealant Equipment & Engineering options:

- Robot Tooling and Dress-Out
- Robot Bead-Path Programming
- System Start-up Assistance

The 2000-022-002 Re-Circulation Multi-Function Gun (MFG) uses three (3) KISS Valves with individually selected dispense tips to dispense the right bead profile. Different models are available to accurately position a wide variety of tips with precise “same-position” bead-path accuracy.

KISS No-Drip® high-pressure dispense valves are ideal for the automated application of pumpable materials. The needle, seat and flow-through design technology enables the KISS valve to perform longer with high volume applications, frequent on-off cycles per part and abrasive materials.

KISS valves incorporate a carbide hardened needle/ball and carbide seat with an abrasion resistant seal to further increase its life cycle and reduce down time. A back-up spring insures fast shut-off when closing the valve or if air pressure is low or lost. Alignment and mounting holes make fixturing simple.

The double air operated Kiss valve design allows higher flow rates due to a less restrictive internal design. This increase in flow rate translates into lower supply pump operating pressures, less down time, and reduced maintenance.
### 3-D MFG Non-Circulating Models:

### Typical Carbide Dispense Tips: (order separately)

- **Slot Ribbon**
- **Medium Fan Airless Spray**
- **Heavy Fan Airless Spray**
- **Narrow Fan Airless Spray**
- **Round Stream (Non-Keyed)**

(many sizes available of each type)
