See-Flo® 7

See-Flo 7 Meter-Mix-Dispense System

- Meter-Mix-Dispense system easily processes material for filter end cap molding and extruded bead dispensing for product assembly
- System provides precise volumetric metering of low to medium viscosity materials
- Meter design provides a continuous flow of mixed material without any reload time
- Able to dispense volumetric ‘shots’ of mixed material; Shot size is manually adjustable
- Adjustable ratio design includes ratio check verification assembly
- Dispense flow rate control is adjustable

Whether your dispense application requires an manually controlled amount or a preset ‘shot’ volume of mixed material to fill different sized end caps, the See-Flo 7 provides the ability to accomplish this task.

The adjustable ratio of the See-Flo 7 permits you to vary the mix ratio in order to produce end caps with different durometers or hardness. The ratio adjustment is simple and the mix ratio can be readily verified with the ratio check feature.

The See-Flo 7 ruggedness provides many years of reliable and dependable metering.
See-Flo 7 Filter End-Cap Meter-Mix-Dispense System

Adjustable Ratio Meter
SEE-FLO 7 models are available to proportion volumetric mix ratio's up to 20:1. Adjusting the ratio is simple. The ratio is quickly verified with the ratio check assembly, a standard feature.

Manual Shot Control
The manual shot size control is easily adjusted. The shot size range is dependant on the metering pumps selected.

Shot controls are also available using ‘timed’ shots or precise shot volumes with the Program-A-Shot electronic control system

Available Accessories
Electronic Shot Control
Electronically control the volume of mixed material dispensed with the Program-A-Shot™ package. This package permits you to electronically store and recall 60 different ‘shot’ volumes.

Manual Shot Control
Control the volume of mixed material dispensed using a manually adjustable hard stop.

Material Supply
Pressure vacuum tanks(2 - 60 gallons), 55 gallon drum racks with transfer pumps, 5 & 55 gallon drum pump assemblies, with or without agitators, are available to suit your production requirements.

Other Accessories
• Cart mounting for portability
• Boom assemblies with valve tool balance
• Handle with trigger actuator
• In-Line mixers with solvent flush components

Mix Disperse Valves for Solvent Free Operation
• Snuf-Bak or No-Drip dispense valves utilize No-Flush disposable static mixers
• No-Flush™ disposable static mixer nozzles eliminate the need to solvent flush at a break or the end of the shift
